**Parent Case Text**

## **TITLE OF INVENTION**

Receipts Scanner and Financial Organizer

## **CROSS REFERENCE TO RELATED APPLICATIONS**

This application claims the benefit of U.S. Provisional Patent Application Number 60/265,406, filed on Feb. 1, 2001.

## **BACKGROUND OF THE INVENTION**

### **Field of the Invention**

This invention relates to a scanner apparatus to scan receipts into a computer and a software program which automatically organizes all the information that can be viewed in various formats, namely, tabular statements, pie-charts, etc., and allows for record keeping, budgeting and reconciliation.

### **Description of the Related Art**

Almost everybody might have wondered at one time or other about where his/her salary is going. Many people think "Although I make more than enough money, I do not know how I am spending it".

You might have attempted to keep track of how you were spending by saving all the receipts, checks, bills and notes about cash transactions, etc. You patiently entered all the receipts into the computer (namely into one of the budgeting or finance managing software programs). This is very laborious and time consuming and after a while you will

loose patience and stop entering the data. There ends the plan to know where your salary is going.

Now, with this invention, you can stop wasting your time typing. Simply take your file of receipts and feed them into the scanner. Within seconds after scanning the receipts, the software organizes all the information into a file on your computer that can be viewed in various formats. It's fast, easy, and convenient. Once the receipts are scanned into your computer, you can use the software to manage your expense information.

A thorough patent search resulted in the following related patents but none of them has proposed so far the idea proposed in this invention. For example, the U.S. Pat. No. 6,240,216 entitled "Method and apparatus for processing an image, storage medium for storing an image processing program" relates to an image method and more particularly to mask processing (noise reduction, smoothing of a pattern or the like) of binary image data by software.

There are a number of different kinds of scanners commercially available and some of these have been patented. However, none of them are of the type described in this invention. When a receipt is fed or inserted the scanner of this invention automatically grabs and moves the receipt while it is being scanned and stops at the completion of the scanning of the bill. In addition, the data is automatically captured and organized into a database which allows the data scanned to be viewable in a number of predefined formats which also can be customized if desired.

The prior art references describe excellent applicability to various purposes other than the purpose the present invention is intended. For instance, the U.S. Pat. No. 5,604,640 entitled "Business card scanner and method of use" relates, in general, to optoelectronic devices and, in particular, to scanning mixed media information cards, storing the information, and displaying the scanned information in a variety of display formats. However, feeding and scanning of receipts and having associated software program to organize the data is not dealt with.

The U.S. Pat. No. 5,644,663 entitled "Portable image scanner having manual or automatic feed" relates to an image scanner for automatically scanning a document to optically read out and output image data that is on the document to an image processing device such as a computer, and more particularly to a portable image scanner capable of selectively uniting a cover member to a scanner body to feed a cut-sheet document to be scanned, or detaching the cover member from the scanner body to move the independent scanner body on a thick document such as a book.

The U.S. Pat. No. 6,115,241 entitled "Attachment of a mobile scanner to a portable computer" generally relates to a portable scanning system and more particularly to a versatile attachment of a mobile scanner to a portable computer.

The U.S. Pat. No. 5,897,625 entitled "Automated document cashing system" relates to automated banking systems and machines including those which employ or are an

improvement on automatic teller machines (ATMs). These systems perform the usual ATM functions and additionally cash money orders and checks for the user without the presence or the assistance of a teller, allow the depositing of cash into the machine and provide additional functions, such as transferring money by wire, depositing cash into an account or purchasing end user items from the machine.

The U.S. Pat. No. 5,920,877 entitled "Text acquisition and organizing system" relates to apparatus for acquiring and manipulating text and, more particularly, to apparatus for acquiring discrete text strings and automatically formatting those text strings, as they are received, into a preselected data format structure. There are a number of situations in which a researcher or reader may desire to record and organize printed or displayed text included in an existing work for future reference or for some other future use. As used herein, the term "text" is meant to encompass information that is intended for presentation for human comprehension and may comprise symbols, phrases, sentences in natural or artificial language, pictures, diagrams, and tables.

There has not been proposed so far a configuration consisting of a scanner and a software program in order to achieve the purpose described by the present patent application.

Thus, none of the prior art references proposed the idea of this invention.

## **SUMMARY OF THE INVENTION**

Briefly stated, the invention is an apparatus to scan receipts with a software which automatically processes, organizes and saves all the information from the scanned

receipts. The invention includes a scanner that is connected to a computer through a Universal Serial Bus (USB) port or parallel port and a software program loaded into the computer. As the receipts are being scanned, all the information from the scanned receipts is automatically entered into the computer. A user needs to insert one receipt at a time into this scanner. The receipts can be grocery receipts, various purchase receipts, credit card receipts, bank statements, etc. The invention automatically collects all the data from the receipts the user has scanned, and processes and organizes all the information. The software categorizes each transaction, so you have instant insight into your expenses. You always know exactly where your money goes. The invention creates reports including Income-Expense, Cash Flow, Budget, etc. The invention instantly lets you customize, sort, and subtotal report information on-screen, and shows where any amount in a report comes from. The invention shows a clear picture of your expenses with a number of instant graphs. The organized data can also be viewed in tabular form or pie-chart form, etc. The apparatus allows editing the information from the scanned receipts. The apparatus also automatically saves the information scanned from the receipts in the Quicken Interchange Format (QIF), allowing it to be imported by any financial management program like Quicken, Money, etc. Each scanned receipt will be turned into an individual transaction. The multiple items in the receipt will be used to create a "split" transaction with proper customizable categories. The software loaded into the computer allows for record keeping, budgeting and reconciliation.

For example, making a budget is easy but adhering/implementing it is difficult, but not when you use the system of this invention. Software enables you to create a budget. Once

you start scanning the receipts, it lets you know at any time where you stand with respect to your budget, whether you kept up or you need adjustment. A budget lets you set a goal for the amount of money you want to spend in a particular category--for example, \$100 per month for entertainment. Then you can run a monthly budget report to compare the budgeted amount to the actual amount that you spent.

The software allows the data from the receipts to be presented in various formats. For example, a list of all the items you have purchased; another list of items you bought from a particular department store; how many times you visited a particular restaurant and how much you spent each time; how much you spent for clothes versus food versus eating outside, etc.

Thus, the software is a simple-to-use financial organizer where all receipt information gets organized into an easily useable format. The software has lots of features to make your life easier. It allows you to find any expense. You can also add notes to the transactions. The semi-processed data can be imported into one of your already existing or familiar programs like Quicken, Money, etc.

Other and further features of this invention will become obvious upon an understanding of the illustrative embodiments about to be described or will be indicated in the appended claims, and various advantages not referred to herein will occur to one skilled in the art upon employment of the invention in practice.

## **BRIEF DESCRIPTION OF THE DRAWINGS**

An embodiment of the present invention will be described hereinafter with reference to the accompanying drawing, in which:

FIG. 1: is a schematic block diagram illustrating the overall arrangement of the scanner and the computer with associated monitor, printer, etc. This overall arrangement is a representative embodiment of the present invention.

FIG. 2: is flow chart of the working of the apparatus.

FIG. 3: is an illustration of various forms of scanned receipts.

FIG. 4A: is an example of Tabular form of Organized Information.

FIG. 4B: is an example of Pie-Chart form of Organized Information.

## **DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENT**

The system, as illustrated in FIG. 1, contains the scanner 1 and the software. The scanner 1 is different from conventional large size scanners you might have seen in some offices or in copying shops. It is a small, light-weight and portable one, and has cables that connect to power outlet for its power and to a computer 2 for communicating back and forth with it. It is capable of scanning receipts of different widths and thicknesses; it has a built-in feeder that takes in receipts as they are fed, similar to a fax machine where the fax page is swept in.

FIG. 2 presents a flow chart of the working of the apparatus as explained in detail below.

The scanner 1 is connected to a computer 2 using a USB port as illustrated in FIG. 1.

Before scanning, the user turns on the scanner 1 and the computer 2. Open the software program by clicking on the icon displayed on the screen (see the monitor 3 in FIG. 1) (Step 10). When the program is loaded into the computer 2 it automatically creates an icon on the screen (see the monitor 3 in FIG. 1). The software opens a window displaying two options (Step 11), to open an existing file (Step 12) or to open a new file. In the case of a new file, it allows you to select the name of the new file by typing it in (Step 13). Once a file is selected, it displays "ready for scanning" (Step 14) Now you can feed the receipts into the scanner 1 one at a time (Step 15). Click "scanning complete" once you have finished scanning all the receipts. You will find that all the information from the scanned receipts is automatically entered into the computer 2 (Step 16). Each receipt is entered as a separate transaction using preselected, or default categories. You have the flexibility to change the categories any time and reconcile. Now the software program in the computer 2 has organized all the information (Step 17). This new or updated file is ready for viewing on the screen (see the monitor 3 in FIG. 1) and/or for printing (see the printer 4 in the FIG. 1) (Step 18). Also, after viewing the file, if needed you can modify or edit each transaction (Step 19). Further, the software also allows for record keeping, budgeting and reconciliation.

Thus, the system " Receipts Scanner and Financial Organizer" is an apparatus to scan receipts and a software to automatically process, organize and save all the information from the scanned receipts; it is connected to a computer 2 through a USB port and a software program loaded into the computer. When receipts are fed into the scanner, the invention automatically enters all the information into the computer 2 that is connected to

the scanner instead of manually typing the information in. As receipts are scanned, all the information from the receipts is automatically entered into computer 2; a software program operating within the computer 2 processes all the information from the scanned receipts and organizes it. FIG. 3 illustrates various forms of scanned receipts. The invention allows editing of the information from the scanned receipts and organized data. This organized data can be viewed in various formats, namely, tabular form (see FIG. 4A), pie-chart form (see FIG. 4B), etc. The tabular data formats include income-expense reports, planned versus actual budget, list of all expenses with different categories, etc. The invention further processes the data and enables comparison with pre-customized budgets or limits in each category.

The invention also allows QIF formatted data to be imported into any financial organizer program like Quicken, Money, etc.

### **POSSIBLE EXTENSIONS**

The invention even comes up with suggestions and recommendations using its large up-to-date data base, namely, how you can save on groceries, how you can improve your health habits, how you can save on insurance, how you can save on travel, compares expenses each month with the previous month, prompts you when certain payments might have to be made, projects certain future expenses using data it has compiled (like birth days, marriage days, etc), how you can maintain budget by changing where you buy or what brand name item you buy, gathers information for taxes (keeps track of items that go into tax preparations), etc.

This is a ~~continuation~~ application claims the benefit of U.S. Provisional Patent

Application Number 60/265,406, filed on Feb. 1, 2001, ~~which is a provisional patent~~  
application.

## BACKGROUND OF THE INVENTION

### Field of the Invention

This invention relates to a scanner apparatus to scan ~~bills~~ receipts into a computer and a software program which automatically organizes all the information that can be viewed in various formats, namely, tabular statements, pie-charts, etc., and allows for record keeping, budgeting and reconciliation.

### Description of the Related Art

Almost everybody might have wondered at one time or other about where his/her salary is going. Many people think "Although I make more than enough money, I do not know how I am spending it".

You might have attempted to keep track of how you were spending by saving all the receipts, checks, bills and notes about cash transactions, etc. You patiently entered all the ~~bills~~ receipts into the computer (namely into one of the budgeting or finance managing software programs). This is very laborious and time consuming and after a while you will loose patience and stop entering the data. There ends the plan to know where your salary is going.

Now, with this invention, you can stop wasting your time typing. Simply take your file of ~~bills-receipts~~ and feed them into the scanner. Within seconds after scanning the ~~bills~~ receipts, the software organizes all the information into a file on your computer that can be viewed in various formats. It's fast, easy, and convenient. Once the ~~bills-receipts~~ are scanned into your computer, you can use the software to manage your expense information.

A thorough patent search resulted in the following related patents but none of them has proposed so far the idea proposed in this invention. For example, the U.S. Pat. No. 6,240,216 entitled "Method and apparatus for processing an image, storage medium for storing an image processing program" relates to an image method and more particularly to mask processing (noise reduction, smoothing of a pattern or the like) of binary image data by software.

There are a number of different kinds of scanners commercially available and some of these have been patented. However, none of them are of the type described in this invention. When a ~~bill-receipt~~ is fed or inserted the scanner of this invention automatically grabs and moves the ~~bill-receipt~~ while it is being scanned and stops at the completion of the scanning of the bill. In addition, the data is automatically captured and organized into a database which allows the data scanned to be viewable in a number of predefined formats which also can be customized if desired.

The prior art references describe excellent applicability to various purposes other than the purpose the present invention is intended. For instance, the U.S. Pat. No. 5,604,640 entitled "Business card scanner and method of use" relates, in general, to optoelectronic devices and, in particular, to scanning mixed media information cards, storing the information, and displaying the scanned information in a variety of display formats.

However, feeding and scanning of ~~bills~~receipts and having associated software program to organize the data is not dealt with.

The U.S. Pat. No. 5,644,663 entitled "Portable image scanner having manual or automatic feed" relates to an image scanner for automatically scanning a document to optically read out and output image data that is on the document to an image processing device such as a computer, and more particularly to a portable image scanner capable of selectively uniting a cover member to a scanner body to feed a cut-sheet document to be scanned, or detaching the cover member from the scanner body to move the independent scanner body on a thick document such as a book.

The U.S. Pat. No. 6,115,241 entitled "Attachment of a mobile scanner to a portable computer" generally relates to a portable scanning system and more particularly to a versatile attachment of a mobile scanner to a portable computer.

The U.S. Pat. No. 5,897,625 entitled "Automated document cashing system" relates to automated banking systems and machines including those which employ or are an improvement on automatic teller machines (ATMs). These systems perform the usual

ATM functions and additionally cash money orders and checks for the user without the presence or the assistance of a teller, allow the depositing of cash into the machine and provide additional functions, such as transferring money by wire, depositing cash into an account or purchasing end user items from the machine.

The U.S. Pat. No. 5,920,877 entitled "Text acquisition and organizing system" relates to apparatus for acquiring and manipulating text and, more particularly, to apparatus for acquiring discrete text strings and automatically formatting those text strings, as they are received, into a preselected data format structure. There are a number of situations in which a researcher or reader may desire to record and organize printed or displayed text included in an existing work for future reference or for some other future use. As used herein, the term "text" is meant to encompass information that is intended for presentation for human comprehension and may comprise symbols, phrases, sentences in natural or artificial language, pictures, diagrams, and tables.

There has not been proposed so far a configuration consisting of a scanner and a software program in order to achieve the purpose described by the subject-present patent application. Thus, none of the prior art references proposed the idea of this invention.

## SUMMARY OF THE INVENTION

~~This is a continuation of U.S. application Ser. No. 60/265,406, filed on Feb. 1, 2001, which is a provisional patent application. Briefly stated, it~~ the invention ~~is an apparatus to scan bills-receipts with a unique software which automatically~~ processes, organizes and

saves all the information from the scanned ~~bills-receipts~~. ~~It contains~~ The invention includes a scanner ~~which that~~ is connected to a computer through a Universal Serial Bus (USB) port or ~~pass thru~~ parallel port and ~~the unique a~~ software program loaded into the ~~computer program~~. As the ~~bills-receipts~~ are being scanned, all the information from the scanned receipts ~~bills~~ is automatically entered into the computer. ~~You~~ A user needs to insert one bill receipt at a time into this scanner. The ~~bills-receipts~~ can be ~~either~~ grocery receipts, various purchase receipts, credit card ~~bills-receipts~~, bank statements, etc. ~~It~~ The invention automatically collects all the data from the ~~bills-receipts~~ you have just the user has scanned, and processes and organizes all the information. The software categorizes each transaction, so you have instant insight into your expenses. You always know exactly where your money goes. ~~It~~ The invention creates reports including Income-Expense, Cash Flow, Budget, etc. ~~It~~ The invention instantly lets you customize, sort, and subtotal report information on-screen, and shows where any amount in a report comes from. ~~It~~ The invention shows a clear picture of your expenses with a number of instant graphs. The organized data can also be viewed in tabular form or pie-chart form, etc. The apparatus allows editing the information from the scanned ~~bills-receipts~~. The apparatus also automatically saves the information scanned from the ~~bills-receipts~~ in the Quicken Interchange Format (QIF), allowing it to be imported by any financial management program like Quicken, Money, etc. Each scanned bill receipt will be turned into an individual transaction. The multiple items in the bill receipt will be used to create a "split" transaction with proper customizable categories. The software loaded into the computer allows for record keeping, budgeting and reconciliation.

For example, making a budget is easy but adhering/implementing it is difficult, but not when you use the system of this invention. Software enables you to create a budget. Once you start scanning the ~~bills~~receipts, it lets you know at any time where you stand with respect to your budget, whether you kept up or you need adjustment. A budget lets you set a goal for the amount of money you want to spend in a particular category--for example, \$100 per month for entertainment. Then you can run a monthly budget report to compare the budgeted amount to the actual amount that you spent.

The software allows the data from the ~~bills~~receipts to be presented in various formats. For example, a list of all the items you have purchased; another list of items you bought from a particular department store; how many times you visited a particular restaurant and how much you spent each time; how much you spent for clothes versus food versus eating outside, etc.

Thus, the software is a simple-to-use financial organizer where all ~~bill~~receipt information gets organized into an easily useable format. The software has lots of features to make your life easier. It allows you to find any expense. You can also add notes to the transactions. The semi-processed data can be imported into one of ~~the~~ your already existing or familiar programs like Quicken, Money, etc.

Other and further features of this invention will become obvious upon an understanding of the illustrative embodiments about to be described or will be indicated in the appended

claims, and various advantages not referred to herein will occur to one skilled in the art upon employment of the invention in practice.

## **BRIEF DESCRIPTION OF THE DRAWINGS**

An embodiment of the present invention will be described hereinafter with reference to the accompanying drawing, in which:

~~Figure~~ FIG. 1: is a schematic block diagram illustrating the overall arrangement of the scanner and the computer with associated monitor, printer, etc. This overall arrangement is a representative embodiment of the present invention.

FIG. 2: is flow chart of the working of the apparatus.

FIG. 3: is an illustration of various forms of scanned receipts.

FIG. 4A: is an example of Tabular form of Organized Information.

FIG. 4B: is an example of Pie-Chart form of Organized Information.

## **DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENT**

The system, as illustrated in FIG. 1, contains the scanner 1 and the software. The scanner 1 is different from conventional large size scanners you might have seen in some offices or in copying shops. It is a small, light-weight and portable one, and has cables that connect to power outlet for its power and to a computer 2 for communicating back and forth with it. It is capable of scanning bills-receipts of different widths and thicknesses; it has a built-in feeder that takes in bills-receipts as they are fed, similar to a fax machine where the fax page is swept in.

FIG. 2 presents a flow chart of the working of the apparatus as explained in detail below.

The scanner 1 is connected to a computer 2 using a USB port as illustrated in FIG. 1.

Before scanning, the user turns on ~~on~~ the scanner 1 and the computer 2. Open the software program by clicking on the icon displayed on the screen (see the monitor 3 in FIG. 1) (Step 10). When the program is loaded into the computer 2 it automatically creates an icon on the screen (see the monitor 3 in FIG. 1). The software opens a window displaying two options (Step 11), to open an existing file (Step 12) or to open a new file. In the case of a new file, it allows you to select the name of the new file by typing it in (Step 13). Once a file is selected, it displays "ready for scanning" (Step 14) Now you can feed the bills-receipts into the scanner 1 one at a time (Step 15). Click "scanning complete" once you have finished scanning all the bills-receipts. You will find that all the information from the scanned bills-receipts is automatically entered into the computer 2 (Step 16). Each bill-receipt is entered as a separate transaction using preselected, or default categories. You have the flexibility to change the categories any time and reconcile. Now the software program in the computer 2 has organized all the information (Step 17). This new or updated file is ready for viewing on the screen (see the monitor 3 in FIG. 1) and/or for printing (see the printer 4 in the FIG. 1) (Step 18). Also, after viewing the file, if needed you can modify or edit each transaction (Step 19). Further, the software also allows for record keeping, budgeting and reconciliation.

Thus, the system "Bills Receipts Scanner and Financial Organizer" is an apparatus to scan bills-receipts and ~~unique-a~~ software to automatically process, organize and save all

the information from the scanned ~~bills-receipts~~; it is connected to a computer 2 through a USB port and ~~the-unique-a~~ software program loaded into the ~~program-computer~~. When ~~bills-receipts~~ are fed into the scanner, ~~it-the invention~~ automatically enters all the information into the computer 2 that is connected to ~~it-the scanner~~ instead of manually typing the information in. As ~~bills-receipts~~ are scanned, all the information from the ~~bills-receipts~~ is automatically entered into computer 2; ~~unique-a~~ software program operating within the computer 2 processes all the information from the scanned ~~bills-receipts~~ and organizes it. FIG. 3 illustrates various forms of scanned receipts. ~~It-The invention~~ allows editing of the information from the scanned ~~bills-receipts~~ and organized data. This organized data can be viewed in various formats, namely, tabular form (see FIG. 4A), pie-chart form (see FIG. 4B), etc. The tabular data formats include income-expense reports, planned versus actual budget, list of all expenses with different categories, etc. ~~It~~ The invention further processes the data and enables comparison with pre-customized budgets or limits in each category.

~~It-The invention~~ also allows QIF formatted data to be imported into any financial organizer program like Quicken, Money, etc.

### **POSSIBLE EXTENSIONS**

~~It-The invention~~ even comes up with suggestions and recommendations using its large up-to-date data base, namely, how you can save on groceries, how you can improve your health habits, how you can save on insurance, how you can save on travel, compares expenses each month with the previous month, prompts you when certain payments

might have to be made, projects certain future expenses using data it has compiled (like birth days, marriage days, etc), how you can maintain budget by changing where you buy or what brand name item you buy, gathers information for taxes (keeps track of items that go into tax preparations), etc.
